

VIKAS K P

Cyber Security Aspirant

+91 6361071654 | [Email](#) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

B.E. graduate in Cyber Security with hands-on project experience across network security, web application security, cloud security, and VAPT fundamentals. Comfortable with Python, C++, and core security tools (Wireshark, Nmap, Burp Suite, OWASP ZAP). Built and contributed to four security-focused projects spanning phishing detection, blockchain security, and cloud application security, with working knowledge of SIEM concepts and the MITRE ATT&CK framework. Seeking a SOC Analyst / Cyber Security Analyst fresher role.

TECHNICAL SKILLS

- Languages: Python, C++, C, JavaScript
- Security Tools: Nmap, Wireshark, Burp Suite, OWASP ZAP, Nessus, OWASP Juice Shop
- Frameworks & Standards: MITRE ATT&CK, NIST, PCI-DSS, OWASP Top 10
- Cloud & Platforms: AWS (Lambda, Bedrock, DynamoDB), GCP, Azure (coursework/lab exposure)
- Other: Git/GitHub, Linux administration (RHCSA), Virtualization (VMware ESXi, pfSense)

PROJECTS

PhishGuard – AI-Powered Phishing Detection System

Nov 2025 – Jan 2026

Python, Django, React, XGBoost, PhishTank API, Google Safe Browsing API, urlscan.io

- Built a phishing URL detection system combining an XGBoost classifier with real-time threat-intelligence lookups.
- Integrated Google Safe Browsing and urlscan.io APIs to cross-validate suspicious URLs against live threat feeds.
- Designed the end-to-end pipeline from URL ingestion through feature extraction to classification, deployed behind a Django/React interface.

Hyperion – Blockchain-Powered Crypto Wallet

Hackathon Project, 2025

TypeScript, Python, Blockchain (Aiken), Shell — Team project; role: blockchain logic & security

- Owned the blockchain layer and security design for a prototype crypto wallet, including transaction handling and asset-management logic.
- Implemented security controls for digital asset storage and designed the threat model for the wallet's trading and rewards features.

CivicBridge AI – AI-Powered Citizen Service Platform

Hackathon Project, 2025

Python, FastAPI, AWS Bedrock, AWS Lambda, DynamoDB, JWT — Team project; role: AI integration, security & AWS infrastructure

- Implemented the RAG-based AI integration with AWS Bedrock to power multilingual policy lookup and eligibility-checking features.
- Built the security layer: JWT authentication, role-based access control (RBAC), and AES-256 encryption for sensitive citizen data.
- Configured AWS Lambda and DynamoDB as the serverless backend infrastructure supporting the platform.

Distributed Firewall in a Virtual Data Center

Mar 2023 – May 2023

VMware Workstation, ESXi 7.0, pfSense Firewall

- Designed and deployed a distributed firewall to enforce network segmentation within a virtualized data-center environment.
- Configured hypervisor-level traffic controls using pfSense, enabling granular policy enforcement between virtual machines.

EDUCATION

RNS Institute of Technology (RNSIT) – B.E, Computer Science (Cyber Security) 2026

- CGPA: 8.0 / 10

Sri Krishna Polytechnic – Diploma, Computer Science and Engineering 2023

- CGPA: 9.0 / 10

CERTIFICATIONS

- [Red Hat Certified System Administrator](#) (RHCSA)
- [Google Cloud Cybersecurity Certificate](#) – GCP
- [Practical Cyber Security for Cyber Security Practitioners](#) – NPTEL
- [Gen AI Academy](#) – H2S
